

PC-3000

PC-3000 Flash/SSD/Monolith Data Recovery Advanced Training

The aim of this training course is to provide you with deep understanding of Flash NAND-based drives, including monolith devices. The contents of this course differ significantly from the contents of the expert course. The program contains numerous practical exercises and tasks with minimal theoretical aspects.

Day 1 Highlights

On the first day, attendees get acquainted with new data recovery techniques using some modes of the PC-3000 Flash that make preparation faster and more efficient (deleting bad bytes, page transformation, etc.)

Day 2 Highlights

The second day is dedicated to solving interesting cases, demonstrating different advanced features of the PC-3000 Flash and using special instruments for data preparation. Students will also deal with uncommon cases, which require much more time to solve: specific recovery methods for complex UFD, Compact Flash and Secure Digital cards.

What you get

- Deeper knowledge and more specialized skills in Data Recovery from NAND-based devices
- Tips how to operate the PC-3000 Flash at a professional level and how to solve complicated cases very quickly and efficiently
- 1 month of FREE Technical Support for your PC-3000 Flash
- Official ACE Lab Data Recovery certification
- Useful handouts and pretty T-shirts!

Only users with sufficient knowledge of the PC-3000 are admitted to this course. Attendees will need to have already completed the Teel Tech Expert Flash/SSD/Monolith course and/or have significant experience in NAND recovery. Attendees are welcome to bring their own devices which they can't restore.
