

Oxygen Forensics Expert Certification

Oxygen Detective® is a complete match for busy forensic labs, accelerating data acquisition from multiple devices by distributing time-consuming operations between multiple workstations.

Oxygen Detective® Extractor recovers the following data (partial list):

- Common device information
- Contacts with all the fields and contact photos
- Missed/Outgoing/Incoming calls and Facetime calls
- Organizer data (meetings, appointments, memos, anniversaries, tasks, notes, etc.)
- SMS, MMS, iMessages, E-mails with attachments
- Device dictionary words
- Photos, videos, audio files and voice records
- Wi-Fi connections
- Device logs
- Passwords to the device owner accounts and WiFi hot spots
- 250+ applications user data: Apple Maps, Booking.com, Facebook, Google+, PayPal, Safari, Skype, Viber, WhatsApp.

Students will obtain a start to finish education on the use of Oxygen Forensic® Detective. The course introduces advanced methods of Smart Device collections and data analysis from iOS, Android, and Windows Phone smart devices.

These methods are able to obtain physical images, understand file system formats, storage methods and evidence locations. Students receive training and instruction on Cloud Storage and extraction techniques using Oxygen Forensic® Detective.

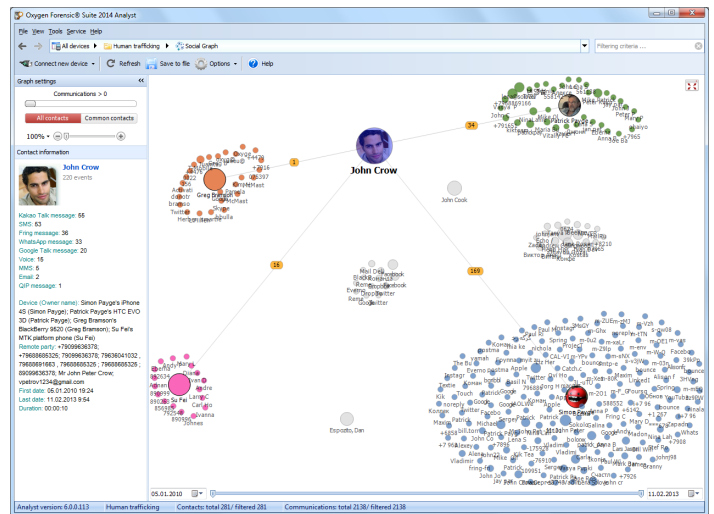

SQLite database data is extremely important to today's smart device examinations. Not only will students receive training on the SQLite database format and creating SQL queries, put Property Lists, recovering deleted data, write-ahead-logs, shared-memory-files and interpreting database artifacts using the SQLite Viewer and secondary tools are covered.

Where: Texas Dept of Public Safety Training Academy
5805 N Lamar Blvd
Classroom G
Austin, TX 78752

When: Apr 16 - 18, 2018

Oxygen Key Features:

- Strong Support for Apple iOS, Android, and feature phones.
- No special hardware needed - works with standard cables and drivers
- Over 10,000 devices supported
- MMS and email attachments are recoverable
- Skype analysis chats / call logs
- JTAG data is importable
- Geo-location data from rooted Android devices
- Geo-location data exportable to Google Earth
- Extensive application user data recoverable from Android and Apple iOS devices
- Now with chinese phone support

Course Outline

Day 1

Topic	Covering
History and Quick Introduction	CDMA/GSM Legality Isolation Techniques Device Security
Different ways to connect to a mobile device	Cable Bluetooth JTAG
Troubleshooting	Drivers Connections ADB
Passwords	iOS Android Blackberry
Logical/Physical collections of Smart Devices	Differences Representation of both with data
Collecting Mobile Device Data	Smart device Collection Basic data analysis
Backup and Import of Mobile Device Images	iTunes Android JTAG Other Forensic Solutions
Basic Reporting	Create basic report of smart device collection

Day 2

Topic	Covering
Multi-device collections	iOS Android
Cases	Creating Cases Removing Cases Archiving Cases Live device Imported Images
App Data	Analysis of valuable data
Key Evidence	Bookmarking
Aggregated Data and Groups	Contacts Merge/Un-Merge
Analytics	Social Analysis Link Analysis Timelines
Searching	Text Regex Numbers
Advanced Reporting	HTML PDF-Associated Images Key Evidence

Day 3

Topic	Covering
Obtaining File System Data	iOS Android Windows Phone
Types of File Systems	iOS Android Windows Phone
Recovering Artifacts from the smart device	Evidence areas File Types Recovery method
Cloud Extractions	Using Cloud Extractor
Property List	Data Storage Types of Data PLIST Breakdown
SQLite Databases	Data Storage Types of Data SQLite Breakdown FreePages SQL Queries Creating/Running
